# Claim Rejections - 35 USC § 112

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 appears to be in Jepson form due to the use of the phrase "the improvement comprising". However, Jepson form would also be accompanied by the introduction "*In* a reinforced garage door". Consequently, the scope of the claim is not clear. For examination purposes, it is assumed that the claim is in Jepson form and that the preamble is admitted prior art.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Leist et al.

See Figs. 3 and 4. See reinforcements 38. The complementing joints are considered the entire upper and lower edges, in which elements 38 are located, and which have "folded" portions in the form of ribs that engage the elements 38. Each element 38 further has five sides. The joints may be broadly considered to be "tongue and groove" and "shiplap".

## Claim Rejections - 35 USC § 103

Art Unit: 3634

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berger, Jr. in view of Leist et al.

See Fig. 5 in Berger where he shows continuous reinforcement members 40',41', which are described in column 4, lines 8-11, that are located in the same location on the panels as presently disclosed. What is not shown is the location of the members 40',41' under the folded edge portions. However, placing these members in such a confining location is taught by Leist et al who shows ribs that firmly locate the reinforcing members in the panels edges. In view of this teaching, it would have been obvious to modify Berger whereby his reinforcing members are located under the folded edges of the panels for such positive positioning. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over either Leist et al or Berger, Jr. in view of Leist et al, as applied above, and further in view of Clark.

Clark discloses edges of panels that fit Applicant's definition of "shiplap". It would have been obvious to modify either Leist et al or Burger, Jr. to have such an edge so as to provide a different seal.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
